A table footnote was mistakenly omitted from Table 1 in the research brief that was published in February 2025 titled "Educating Health Professions Students About Older Adults: Results From the Age-Friendly Students Senior Connection".¹ The subcategory total of the "Race and ethnicity" exceeds the overall survey population (50 vs 46) due to the fact that respondents selected multiple options in this category. A footnote has been added to table 1 to explain this. The overall findings of the study are not affected by this omission.
